## 7 Security Pitfalls

Ignoring the risk

Reactive, short-term fixes

Failure to quantify potential losses in assets and reputation

Rely primarily on a firewall

Failure to monitor

Value physical security over Information security

Assign responsibility to staff members who have neither the training nor the time

Source: SANS Institute

## Security NOW!

*Malice, mischief, or mistakes. Any of these can compromise the security of your organization's information assets. The repercussions could include losses of revenue and profit, productivity, customer confidence, and corporate reputation. The legal liabilities associated with the failure to protect certain kinds of data must also be considered.*

*Lighthouse Computer Services can help you to measure the risk and develop the policies and procedures that will minimize your exposure. Our consultants each have a minimum of 15 years industry experience and, collectively, have over 150 Certifications. You can work with the best in the industry on the best solutions for your business.*

*Give us your nastiest IT Security problem. We'll give you peace of mind.*

Sincerely,

Tom Mrva, CEO  
Lighthouse Computer Services, Inc.
