

Why is Strategic Computer Solutions the best choice for a partner in technology solutions?

Our Core Competencies

- Infrastructure
- eHosting
- Security Assessments & Solutions
- eBusiness Enablement
- Network and Storage Solutions

Our Leadership Position in the Industry

- IBM Premier Business Partner and OnDemand Accredited
- IBM 5 Star VAP Certification Across all IBM Software Brands
- IBM Client Satisfaction > 92%
- IBM Leadersip Award Winners
- Beacon Award Winning Software Team
- Beacon Award Winning Financing Team
- Top Commercial Security Partner, Cisco Summit 2007
- 325+ Cross-brand Certifications
- Significant Investment in a Hardware and Software Innovation Center in Boston
- Cross brand SP1 solutions
- Experience implementing \$2.3M solution at a NYS government agency
- Member of 11 IBM Advisory Councils

STRATEGIC COMPUTER SOLUTIONS
Knowledge. Experience. Results.

DRAFT

STRATEGIC COMPUTER SOLUTIONS

Knowledge. Experience. Results.

Innovate. Collaborate. Accelerate.

**Solutions For The Public Sector
Building Stronger, More Personal, Connections
Between Government Agencies and Constituents**

*State and Local Government Agency Web Application Networks
The Challenge And The Opportunity*

State and local government agencies have developed legacy applications that do not have a simplified, unified, secure access for their constituents. Each of these applications has its own user interface, taxonomy and security models that offer no way to relate one application to another. Currently, it isn't possible to personalize an aggregated rendering of these applications and target both real time and batch communications to constituent segments.

Strategic Computer Solutions is focused on delivering a solution to state and local government agencies that will:

- Provide a personalized electronic catalog of applications and online assets for each constituent
- Organize these applications/assets and build relationships between those applications
- Enable simplified and standardized communications to the different constituents in real time
- Easily manage the relationships between the constituents.
- Leverage the existing security models for each of these legacy web applications
- Support communication in real time, in batch, to specific constituent market segments.
- Establish financial remuneration capabilities for fee-based access

*SCS is a 2007 IBM Beacon Award Winner
for Most Innovative Financing Program
in the Americas*

IBM. **WebSphere** software

IBM. **Lotus** software

IBM. **Tivoli** software

IBM. **Rational** software

The Solution

Solution Highlights:

We work with government agencies of all sizes to help implement the best solution for their specific goals. These solutions are designed to:

- Deliver powerful collaboration and portal software in one easy-to-buy, easy-to-use and easy-to-manage offering
- Improve efficiency and productivity with an enhanced portal user experience by accelerating application and content deployment with an SOA
- Reduce IT management costs by enabling you to develop, deploy and manage a simplified constituent experience
- Provides personalized access to information, applications, processes and people
- Decrease training and travel costs by enabling online collaboration such as Web conferencing, e-learning and document management

SCS Has Unique and Extensive Experience Developing State Web Application Network Solutions

SCS is working with New York State Agencies to implement an innovative, cross brand solution that:

- Utilizes WebSphere Commerce Catalog to enable a very intuitive and personalized rendering of the application/assets by constituent
- Leverages the catalog and merchandizing features of WebSphere Commerce
- Leverages the marketing components of WebSphere Commerce for easily managed communications with constituents
- Leverages existing Administration Console to easily manage relationships between constituents such as Tax Payers and Tax Preparers
- Leverages the Services Oriented Architecture (SOA) aware exits in WebSphere Commerce
- Provides a platform to support fee based ecommerce if required
- Is bundled on IBM System p (pSeries) and Storage Solutions to provide for scalability and reliability.

Similar projects are underway with several other Government Agencies, including local government.

- John Smith, IBM

Government On Demand

The Internet has dramatically changed the expectations of citizens. The demand for fast, simple access to relevant information and services is increasing. At the same time, budgets are being cut and staffing levels are being reduced. SCS can help your agency bridge the gap with solutions that significantly cut costs while providing better service.

A Comprehensive Solution For Complex Requirements

Whether you are making the transition to become more citizen-friendly with one service or one agency, SCS can provide the best products and services to help make a seamless transition. Our solutions can be implemented end-to-end or custom designed on a smaller scale. We offer:

- End-to-end systems evaluation, planning and process re-engineering consultation to ensure optimal integration
- Server-centric, platform-neutral infrastructure for easier integration with existing legacy systems
- Security Solutions Expertise
- SOA Compliant
- Project Management
- Knowledge and Skills Transfer

ROI

As more of the business between government agencies and citizens is streamlined through the Internet, the cost of providing services decreases. Government agencies are able to:

- Significantly cut costs by eliminating manual, paper-based processes
- Increase productivity and efficiency
- Reduce expenses for B2G and G2B transactions
- Gain the ability to support fee-based access where it makes sense
- Foster economic development by supporting easier access for local businesses to participate in online government
